

Winter 2006 SEMINAR SERIES

F21C Bioprocessing & Biosensing Center

• DIVISION OF FOOD SYSTEMS & BIOENGINEERING •

PRESENTER: **Dr. Joe M. Regenstein, Professor**
 Department of Food Science, Cornell University

TITLE: **Ethnic and Religious Foods: Where are we in the US?**

ABSTRACT:

As America embraces a more multicultural approach, moving from the melting pot to a salad bowl paradigm, it becomes more important for those involved in producing our food supply to understand the changes that are taking place in our country and some of the implications of these changes. An important driver is the changing demographics of the American population as we move away from being a country that is mainly populated with European immigrants to one with a more world-wide base. Change, although unsettling, presents many new opportunities for those who are prepared to open up their minds to the new reality. An understanding of the needs of these communities will be an important part of successful product development in the future.

DATE • TIME • LOCATION:

Tuesday, February 21, 4:00pm
Ag Eng Bldg 105 • Refreshments
